### Primary and Revision Total Ankle Replacement: Evidence ...

Ankle replacement surgery is a procedure to replace this damaged joint to eliminate this pain and swelling. Typically, the procedure takes place under general anesthesia. Your surgeon will make an incision in your ankle to access the affected joint. Next, your surgeon will remove the damaged parts of your tibia and talus bones.

The ideal patient for total ankle arthroplasty (TAA) is a lightweight individual with a body mass index between 19 and 25 kg/m<sup>2</sup>, no deformity (i.e., varus or valgus <10 degrees), and low demand who has severe pain secondary to loss of cartilage in the ankle and has retained at least 70% of his or her normal range of motion. Patients with previous subtalar or talonavicular fusion or severe arthritis in these joints are also considered good candidates because pantalar fusions would be their ...

### Primary Ankle Replacement | Musculoskeletal Key

total ankle replacement (TAR) continues to provide challenges for surgeons, patients, and device engineers. The Zimmer Trabecular Metal TAR (Zimmer, Warsaw, IN) was designed to address the challenges that are routinely encountered with primary TAR, such as bone fixation, excess osseous resection, and wound healing issues. This third-generation

### Primary and Revision Total Ankle Replacement

Total ankle replacement (also called ankle arthroplasty) is a surgical option for patients with arthritis of the ankle. This operation can relieve pain and maintain motion in the arthritic ankle joint and is an alternative to arthrodesis (ankle fusion) which can relieve pain but eliminates motion in the joint. Although it does not have the same long-term track record of hip or knee replacement, shorter-term studies on ankle replacement look very promising.
